

Install nRF8001 libraries for BLE Shield / Blend / BlendMicro Using Arduino Library Manager

Last updated: 06/05/2015

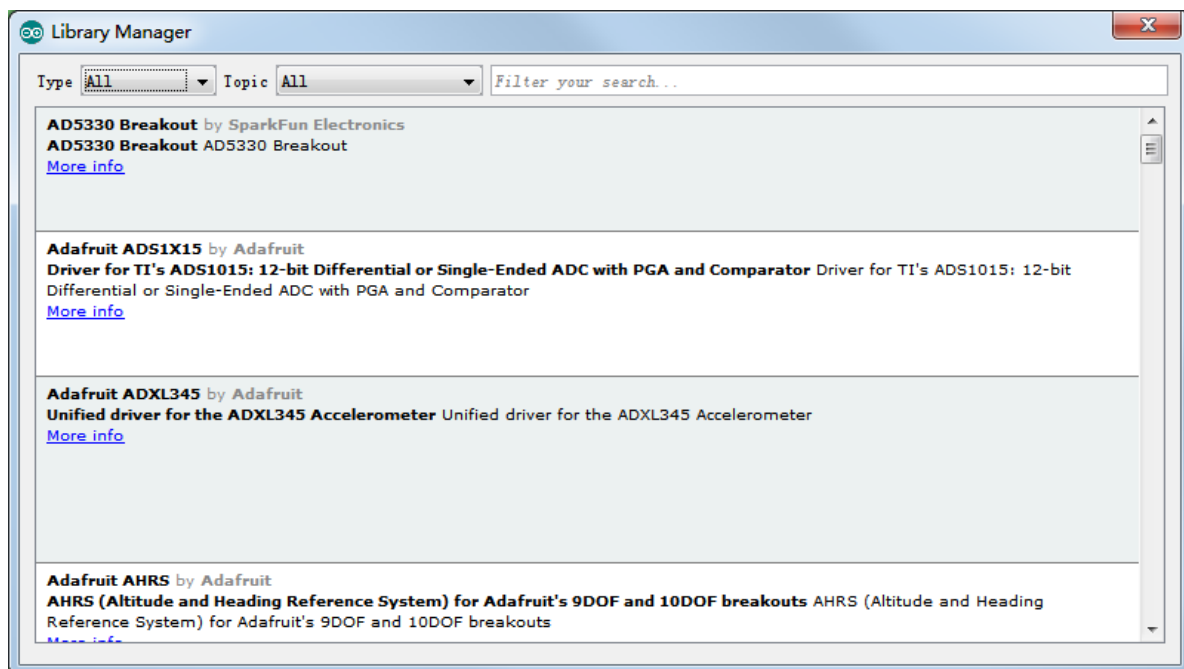

Step 1

Go to [Arduino official website](http://arduino.cc) to obtain the Arduino IDE 1.6.4 or above version and install it on your PC. After installation complete, start the Arduino IDE.

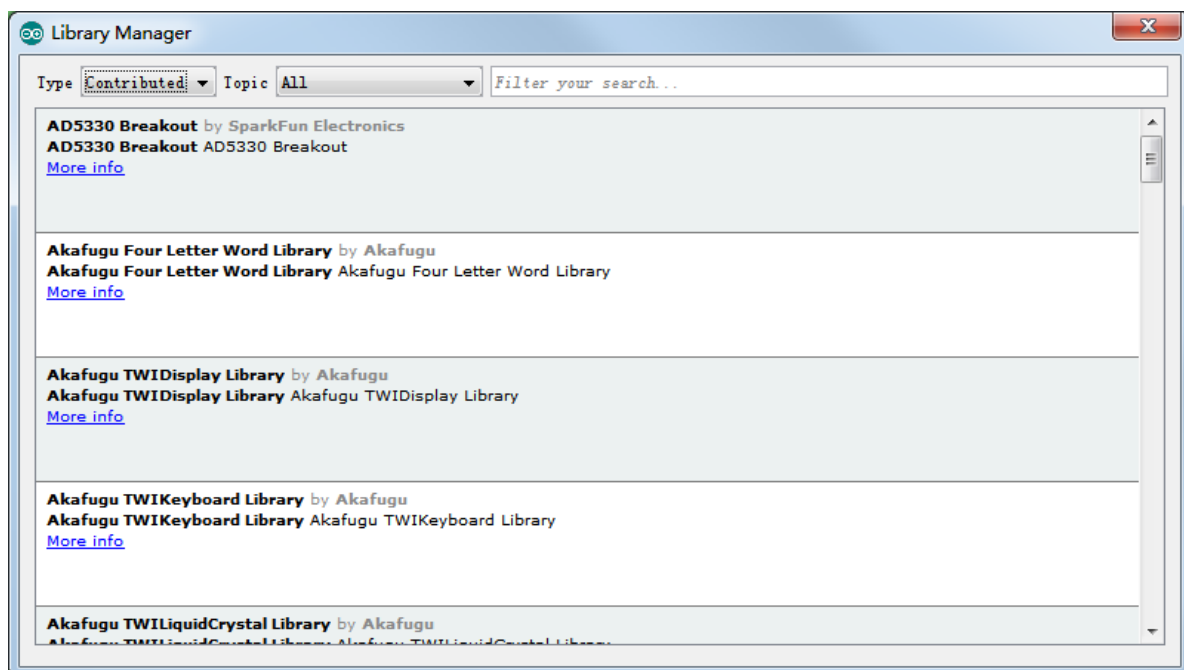

Step 2

Navigate to "Sketch > Include Library > Manage Libraries..." to open the Library Manager window.

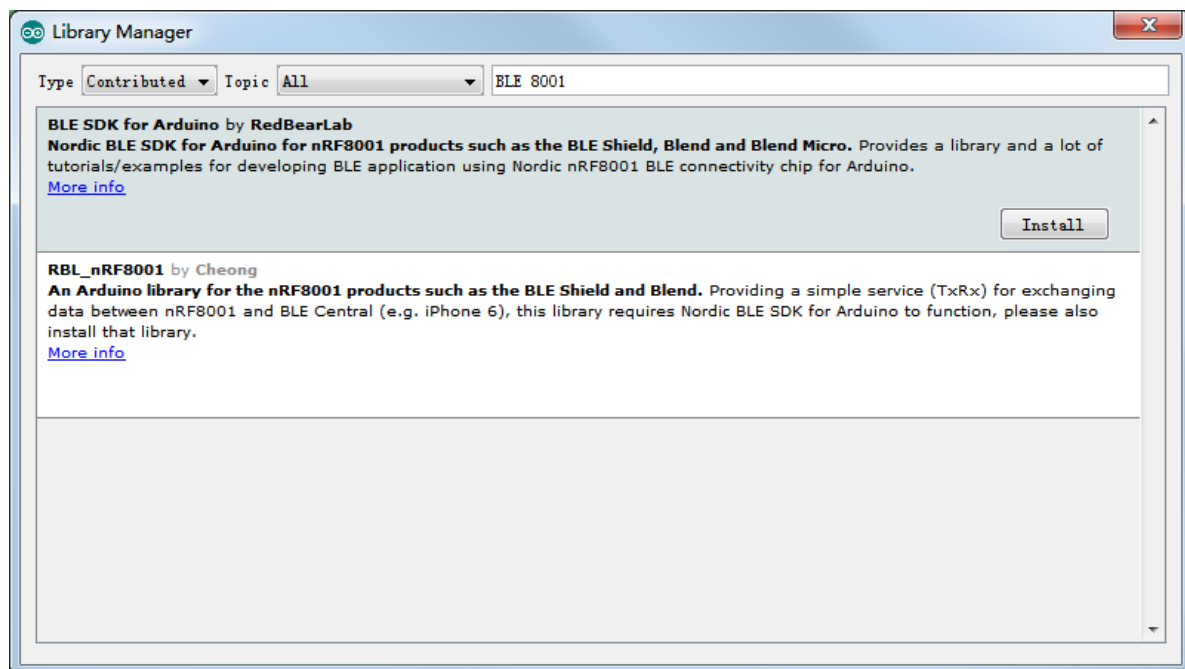

Sort the contributed libraries by selecting the type as **"Contributed"** on the left-top corner of the window. It lists all the contributed libraries those are available to be installed or have been installed.

Step 3

Type in the key words, e.g. "BLE 8001", in the search input field to fast filter the libraries associated the key words. Here we need to install two libraries: **"BLE SDK for Arduino"** and **"RBL_nRF8001"**.

The library dependency is: YourSketch.ino -> RBL_nRF8001 library -> BLE SDK for Arduino library. Also you can use the "BLE SDK for Arduino" library directly, since it also provide lots of examples in the library, but the "RBL_nRF8001" library provides more simple BLE APIs and examples to make you have a better experience.

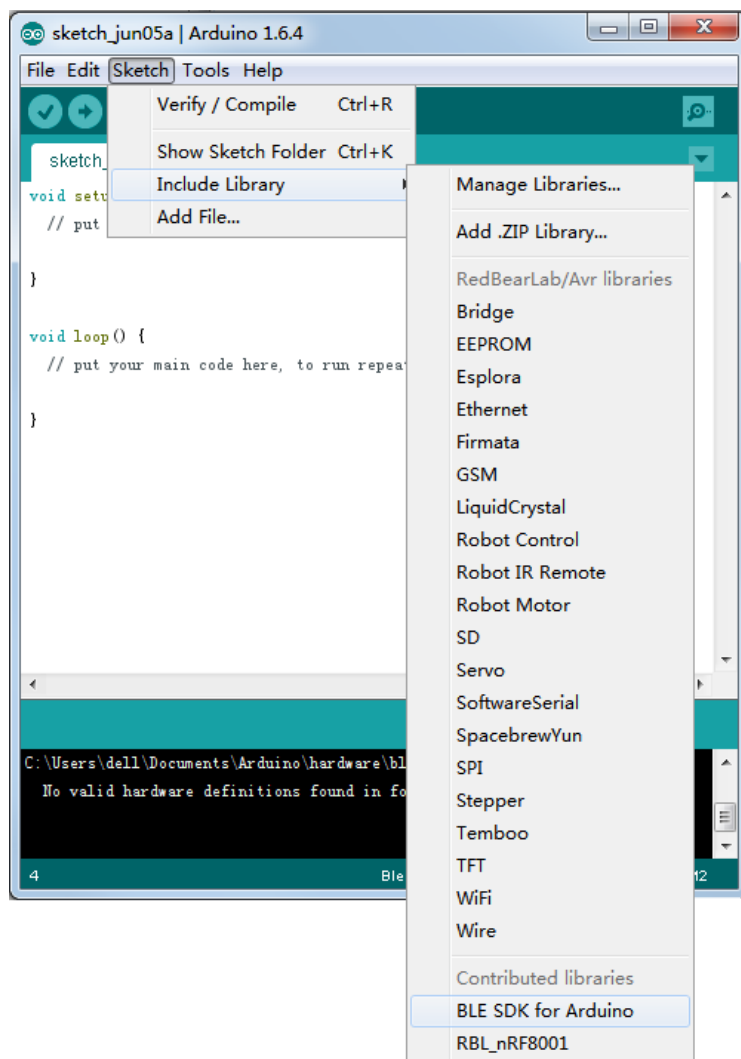

Select these two libraries and click on the "Install" button to download and install them onto Arduino IDE. For Windows users, the installed libraries usually under "C:\Users\"**user_name**>\Documents\Arduino\libraries". You can delete specified installed library under the "libraries" folder to uninstall them.

After the installation progress completed, close the Library Manager window.

Step 4

Navigate to "Sketch > Include Library", you will see these two libraries have been installed onto Arduino IDE.

Now you can open an example that under these libraries by navigating to "File > Examples > BLE SDK for Arduino" or "File > Examples > RBL_nRF8001".
